

## Energy policy of Westfälische Drahtindustrie GmbH

Westfälische Drahtindustrie GmbH (WDI) has set itself the goal of using energy sparingly and sustainably. WDI therefore endeavours to continuously improve energy efficiency within the company in order to conserve natural resources and increase its own competitiveness. In order to achieve these goals, an energy management system in accordance with **DIN EN ISO 50001:2018** is being introduced and continuously developed throughout the company.

**WDI's energy management system is based on the following principles:**

- Obligation to comply with all energy industry laws and regulations
- The management undertakes to provide the necessary financial and human resources for the operation and improvement of the energy management system and the continuous improvement of energy-related performance
- Communicating the energy policy to all employees and interested third parties
- Inform suppliers and all those working for the organisation about the principles
- Publication of strategic and operational energy efficiency targets in the company
- Measure, record and analyse significant energy consumption in order to identify opportunities for improvement and to integrate these into the operating processes
- Train and support employees in the implementation of energy-saving measures and encourage their promote their commitment
- Purchase of energy-efficient products and services and to implement energy efficiency as a further procurement criterion
- The Executive Board and energy management officers regularly check whether the requirements, implementation and measurability of the efficiency targets have been achieved.
